

Leadership Portfolio Redesign

DeepThought Product Management Internship Assignment

Design Goal

The existing Leadership Portfolio behaves like a monitoring dashboard where all metrics compete for attention equally.

My redesign transforms it into a career artifact that communicates an employee's monthly story. The design borrows principles from pitch decks, performance reviews, and professional portfolios rather than analytics dashboards.

The primary objective is to answer:

- What did I contribute this month?
- How did I grow this month?
- What is blocking my progress?
- Where am I heading next?

within 60 seconds of reading.

Design Decisions

1. Narrative-Led Hero Section

I replaced the dashboard-style metric summary with a narrative headline.

Instead of showing multiple metrics immediately, the page opens with a human-readable summary describing the employee's month.

Example:

"Strong delivery month with consistent capability growth. On track for the next career milestone."

The composite score, pace status, and level remain visible but act as supporting evidence rather than the primary message.

2. Contribution Before Capability

The portfolio first presents what the employee produced before showing how they developed.

This follows natural storytelling:

1. What was achieved
2. How it was achieved
3. What impact it created
4. What challenges existed
5. What comes next

This structure makes the document easier for mentors and supervisors to consume.

3. Constraints Reframed as Operating Constraints

The original constraint section risks appearing negative.

Instead of presenting blockers as failures, I present them as operational realities that were managed during execution.

The section emphasizes:

- Resolution rate
- Types of constraints
- Organizational learning

This preserves diagnostic value while maintaining a professional tone.

Design Challenges Addressed

Challenge 1: The Signal

Position: Use a narrative headline supported by a composite score.

Reason: People remember stories more effectively than numerical summaries.

Challenge 2: Story vs Data Ordering

Position: Narrative first, evidence second.

Reason: The portfolio is intended primarily as a career artifact rather than a monitoring tool.

Challenge 3: Six Sections

Position: Keep all six sections but create hierarchy.

Reason: Contribution Highlights, Capability Growth, and Career Trajectory receive visual priority while KPI Impact and Constraint Patterns remain compact.

Challenge 4: Constraints

Position: Present constraints as operational learning.

Reason: This encourages honest reporting without making the portfolio feel like a complaint document.

Challenge 5: Portability and Identity

Position: Identity should be visible at the top of the document.

Reason: The portfolio follows the employee permanently through its UID and should feel like the employee's document rather than the company's report.

Assumptions

- Employees primarily review the portfolio monthly.
 - Supervisors use it during performance discussions.
 - Narrative text is generated server-side and supplied by the backend.
 - Employee profile information is available from the authenticated session.
 - Most users spend less than two minutes reviewing the portfolio.
-

Future Improvements

If given additional time, I would:

- Design a mobile-responsive version.
 - Test multiple signal formats (headline vs score ring vs grade).
 - Introduce expandable evidence drawers for deliverables and KPI details.
 - Conduct usability testing with employees and supervisors to validate narrative-first ordering.
-

Conclusion

The redesign transforms the Leadership Portfolio from a monitoring dashboard into a professional career artifact that employees can confidently share with mentors, supervisors, and their future selves.
